

The ARRL (Amatuer Radio Relay League) will tell you Morse code tests are a good way to measure the radio operators' ability and skill. This is wrong.

First of all, the ARRL only speakes for 10% of amatuer radio operators.

And, Morse code is simply a language for communication. It does not measure skill or ability or knowledge of radio law. And as a language it is fast fading from use.

In any case, it does not measure radio operator ability.

The Morse code testing requirement should be dropped completely and immediately.
